Ahmed Nezar Abdelkader

AI Engineer

ahmednezar732@gmail.com | www.linkedin.com/in/ahmednezar7 | 01147292955

Profile

AI Engineer experienced in Machine Learning and modern AI System Design. Actively developing expertise in Agentic AI, focusing on creating scalable architectures for complex reasoning tasks. Proven ability to optimize system performance and deliver innovative, high-impact AI solutions that solve real-world problems.

Education

B.Sc. in Computer Engineering – Data Science Specialization Faculty of Engineering, Ain Shams University (June, 2025)

Graduation Project: Developed a smart assistive application integrating YOLO-based object detection, visual question answering, and sound detection to support visually impaired users in real-time navigation and environment understanding.

Experience

AI & Automation Engineer – Freelance (Present)

- Built and deployed n8n workflows integrating ClickUp, OpenAI, and Sheets APIs.
- Designed pipelines that logged structured Sheets reports, reducing manual reporting time and improving efficiency.

Marzone Agency – Part-time MEAN Stack Developer (2022 – 2023)

- Developed and maintained MEAN stack web applications.
- Built a full web platform for influencer campaign management.
- Developed additional brand websites for various clients.

Certificates

- AI & ML 4 Months Program | National Telecommunication Institute (NTI), Current
- AI & Machine Learning Summer Camp | Information Technology Institute (ITI), 2024
- Machine Learning Specialization | Coursera, 2024
- Artificial Intelligence Training | WE, 2022
- Frontend Development Course | Route, 2021
- Microsoft Frontend Development Course | Mesmak, 2019

Technical Skills

- **Languages**: Python, SQL, JavaScript.
- **Generative AI**: Agents, RAG, LangGraph, LLM Orchestration, Fine-tuning.
- **Machine Learning**: NLP, Deep Learning, PyTorch, Pandas, Scikit-learn.

Projects

- **Agentic Financial Analyst**: Engineered a robust multi-agent system using LangGraph to answer complex business questions. The workflow autonomously decomposes user intent, generates and validates SQL queries, and computes analytics, significantly reducing manual data analysis time.

- **Arabic-to-SQL Model**: Leveraged QLoRA to efficiently fine-tune an LLM for the Egyptian dialect. This solution bridges the language gap in data access, allowing users to generate complex database queries using conversational **Egyptian** Arabic.

EXTRA-CURRICULAR ACTIVITIES

Resala – Volunteer Team Coordinator, Feeding Program | 2015 – 2020

- Led a volunteer team managing logistics, food distribution, and outreach for 600+ beneficiaries weekly.
- Developed a Node.js & MongoDB-based management system with dashboards and attendance tracking to streamline operations and monitor participation.

Languages

- Arabic – Native
- English – C1
